ACKNOWLEDGEMENT :

First and foremost, we would like to thank our mentor of this project, Mr Sanjeev Kumar for the valuable guidance and advice. He inspired us greatly to work in this project. His willingness to motivate us contributed tremendously to our project. We also would like to thank him for his continuous support for the successful compilation of the project. Besides, we would like to thank SRM University, AP for providing us with a good environment and facilities to complete this project. We thank them for offering this subject, Web Technology(WT). It gave us an opportunity to participate and learn about the HTML,CSS and Javascript. Finally, an honorable mention goes to our families and friends for their understanding and support of us in completing this project. Without the help of the particular that mentioned above, we would face many difficulties while doing this.

Aim :

Food suggesting website is a website that aims at giving suggestions to the customers who are searching for restaurants. Currently, the process involves taking the feedback from the user's who visited the website so that based on the feedback we are ranking the restaurants.

Where can we use this code ?

We can use this code in several aspects like visitors can use this website to check the famous restaurants which are categorized by cities and food items. This project mainly focussed on tourists who are visiting India.

What information are we going to collect ?

In the beginning of the website we are asking to create an account so that next time he/she can login easily by the next time. In the sign-up form we are going to collect user name, email-id, mobile number, password and username.

Algorithm :

1. We are displaying the login page and sign up form. If the user is new to the website he/she can create an account so that next time he can login easily.
2. If the user already has an account but he forgot the password he can click forgot the password so that he can reset the password.
3. After logging in, the home page opens. In the home page we gave the customer's reviews and opinions on the different restaurants. At the end of page it will ask to enter the feedback of the restaurants.
4. There are 4 options in the navigation bar of the home page. They are "Our cities", "Restaurants", "Offer Zone" and "About us".
5. When the user clicks on Our cities it will display a bunch of cities and it's restaurants so that users can check the cities and it's food items.
6. Finally, in the About us page it will show the information of the project developers.

Conclusion :

This project has been built to deal with the visitors or the users who are waiting for food suggestions in the restaurants. It has high security and requires less manual labor.

TABLE OF CONTENTS :

7. Code	3-89
8. Sample Input and Output	90-92
9. Conclusion & Recommendations	92
10. Future Scope	93

1. INTRODUCTION :

1.1 OBJECTIVE

- To deal with the Food suggesting website in an easy and efficient manner.
- Creating a strong password can help to bring strong security.

1.2 SCOPE OF THE PROJECT

- This website is designed for tourists and regular users.

1.3 OVERVIEW OF THE PROJECT

Food suggesting project is a website which gives suggestions to many tourists and regular cities based on the restaurants ranked by the users. Currently the process involves taking the details so that the website creates an account to everyone so that he/she can give feedback after visiting this website.

2. OVERALL DESCRIPTION :

2.1 SYSTEM REQUIREMENT

To use this website users must have upgraded browsers like Chrome, Edge, Safari etc.

3. USER REQUIREMENTS DEFINITION :

The user requirement for this system is to make the system fast, flexible, less prone to error, reduce expenses and save the time.

1. Less human error
2. Strength and strain of manual labor can be reduced
3. High security
4. Easy to handle
5. Easy record keeping

4. SYSTEM REQUIREMENT SPECIFICATION

4.1 FUNCTIONAL SYSTEM REQUIREMENT

This section gives a functional requirement that is applicable to the HMS. These are sub modules in this phase.

- User Module

The functionality of module is as follows :

- USER MODULE

The User can :

1. Creates a sign-up with the details given by the user.
2. User can reset the password if he/she forgot the password by clicking the forgot password button.
3. After sign-up user can login into the website with the correct credentials.
4. Users can check which restaurant has the highest reviews.

4.2 NON-FUNCTIONAL SYSTEM REQUIREMENTS

4.2.1 Performance Requirements

Some Performance requirements identified is listed below :

1. The browser has to be in the latest version to load all the contents in the website.

4.2.2 Safety Requirements

The user has to create a strong password for stronger security.

4.2.3 Security requirements

Some of the factors that are identified to run the website perfectly.

1. Latest browser.

5. HARDWARE REQUIREMENTS

- Processor : Pentium or greater
- RAM : 512 MB

- Recommended browser
- Keyboard
- Monitor

6. SOFTWARE REQUIREMENTS

- OS : Windows
- Visual Studio code or text editor

7. CODE

8. SAMPLE INPUT AND OUTPUT

9. CONCLUSION AND RECOMMENDATIONS

Food Suggesting project is a website which is useful for tourists. It will help the tourists and other people who are searching for top most restaurants and food items which are ranked from best to worse.

This website is very flexible and it can be upgraded according to the demand of users in the website.

This website is offering a maximum of stability, cost-effectiveness and usability. It provides the most flexible and adaptable to the user.

10. FUTURE SCOPE

Food suggesting project is a website for tourists. It is easy to extend the system that we have proposed. In future we can implement some features for the "FOOD SUGGESTING WEBSITE" project. In this website we can implement the offer zone page so that users can order the food directly on the page itself. So that this application will be easier for the user.
